Composing Good Photographs

CS 178, Spring 2013

Marc Levoy Computer Science Department Stanford University

"There are no rules for good photographs, there are only good photographs." - Ansel Adams

Outline

- + the pictorial elements of photography
 - line and form
 - pattern and texture
 - tone and color
- pictorial design,
 i.e. the design in the 2D picture frame
 - symmetry and balance
 - framing

- common compositions
- + things we won't talk about today
 - situation, storyline, viewpoint, field of view, focus, lighting, exposure, color balance, post-processing

Learning good composition

there are no rules

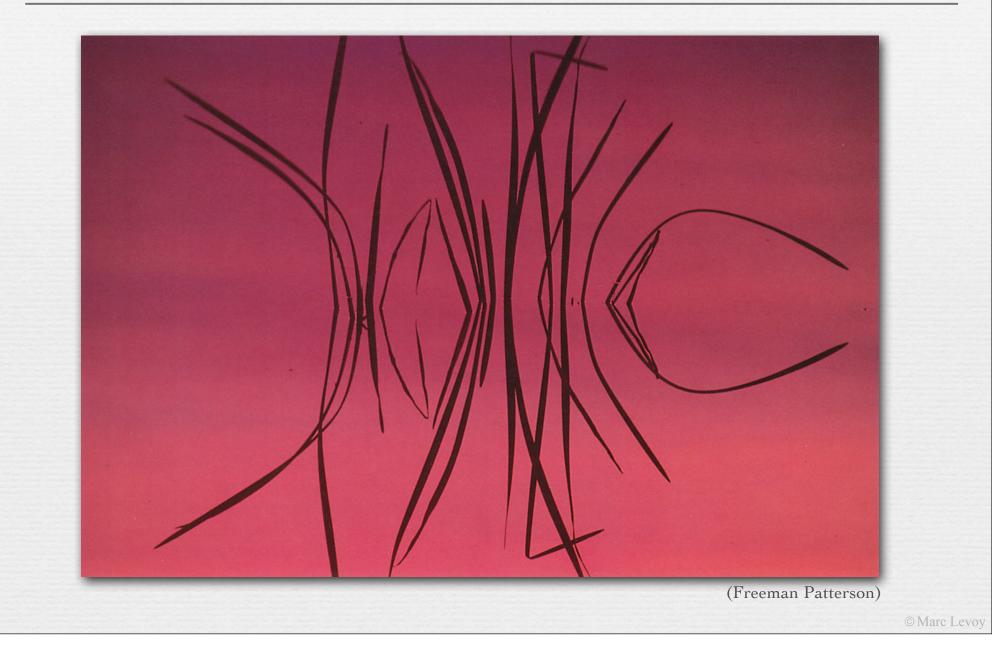

- there are only tools and heuristics
- + like describing wine with words, they don't mean much
 - they merely give us a framework for thinking about issues
- the best way to learn is to take lots of pictures
 - think about the issues as you take them
 - critique your photographs, and have others critique them
- look at good photographs by others
 - famous photographs are seldom accidents; the photographer thought about pictorial design
 - most useful if you've also tried the same thing yourself

Lines as a pictorial element

Ansel Adams, Aspens, 1958

Arrangement of lines

Rajasthan, 2008

• off-center placement of main subject underscores the asymmetry of the architecture

Balance

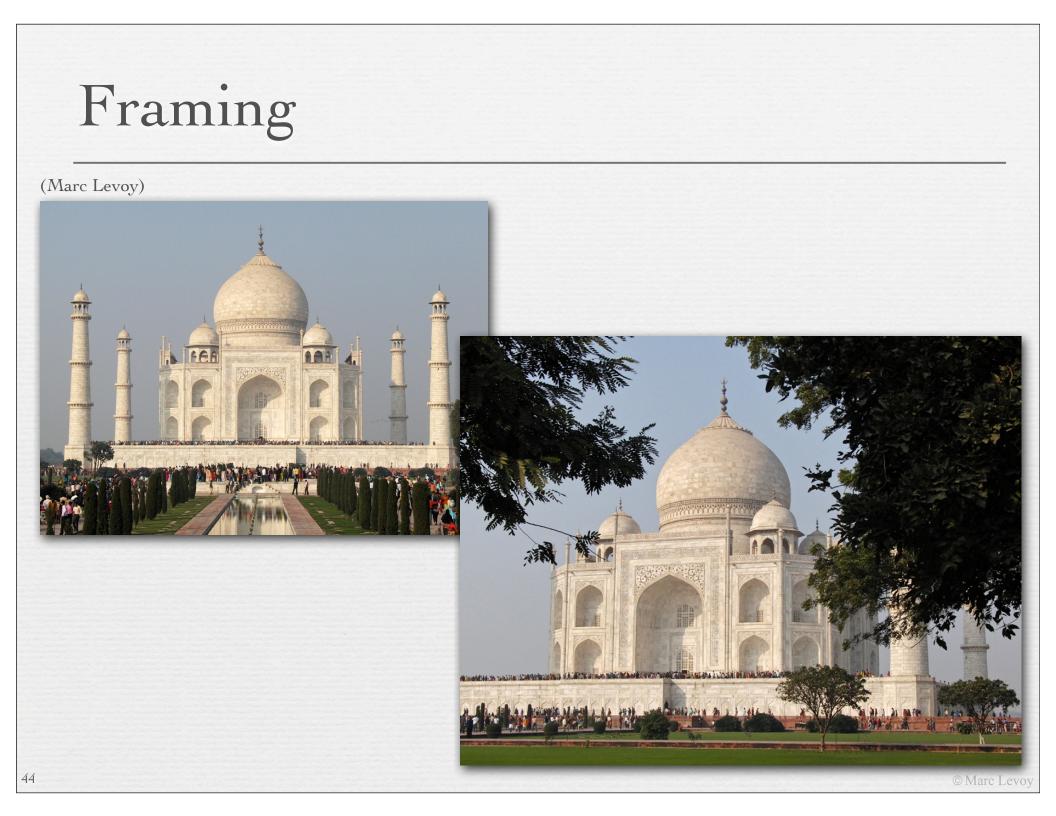

• symmetrical background + dynamic, unbalanced foreground

(Freeman Paterson)

Jacque-Louis David, Oath of the Horatii, 1784

More dynamic framing

shadow edges complete the frame
slashing diagonals create tension

Dennis Stock, James Dean, 1955
