# Multi-perspective panoramic imaging: The Stanford-Google CityBlock Project

Marc Levoy Augusto Romàn Gaurav Garg

#### Computer Science Department Stanford University

### **A Stanford-Google collaboration**

#### • goal

 to obtain a useful visual representation of every commercial city block in the United States

- applications
  - graphical yellow-pages associate images with web sites
  - in-car navigation get a picture of the place you' re going

#### • prototype

– digitize San Francisco by Summer 2005

# The historical solution: panoramic maps

[Munster, 1549]

[Glover, 1888]

+ clearly depicts features of interest- laborious to create

# **Aerial photography**

#### http://www.keyhole.com/

![](_page_3_Picture_2.jpeg)

![](_page_3_Picture_3.jpeg)

- + feels like flying
- not like driving or walking

## **360-degree panoramas**

#### http://www.cambridgelive.co.uk

![](_page_4_Picture_2.jpeg)

![](_page_4_Picture_3.jpeg)

#### + like being there

- but only at the street corners

## Sequence of eye-level images

#### http://www.pagesjaunes.fr/

![](_page_5_Figure_2.jpeg)

![](_page_5_Picture_3.jpeg)

- + every building clearly shown
- no continuity

## **Eye-level photomosaics**

#### http://www.seamlesscity.com/

![](_page_6_Picture_2.jpeg)

- + buildings shown in context
- seams placed manually

#### A texture-mapped 3D model of Berkeley [Zakhor, 2004]

#### range data from airborne laser

triangulation

simplification

![](_page_7_Picture_4.jpeg)

3D model + aerial photograph

#### Street-level acquisition [Zakhor, 2004]

![](_page_8_Picture_1.jpeg)

3D model + street-level photograph

![](_page_9_Picture_0.jpeg)

## How good does it look?

![](_page_10_Picture_1.jpeg)

- from the air: pretty good
- from the street: not as good

## How good does it look?

![](_page_11_Picture_1.jpeg)

- but good enough for an in-car display?
- and it looks like the view you see from your car

#### **Other problems with 3D models**

![](_page_12_Picture_1.jpeg)

- unexpected objects embedded in model
- trees and other occluders create holes

© 2004 Marc Levoy

## **Our approach: multiperpective panoramas**

- capture video while driving
- extract middle column from each frame
- stack them to create a panorama

![](_page_13_Picture_4.jpeg)

## **Our approach: multiperpective panoramas**

![](_page_14_Picture_1.jpeg)

# **Our approach: multiperpective panoramas**

![](_page_15_Picture_1.jpeg)

© 2004 Marc Levo

# **Glide projections**

![](_page_16_Picture_1.jpeg)

left glide projection

![](_page_16_Picture_3.jpeg)

centered glide projection

![](_page_16_Picture_5.jpeg)

right glide projection

## **Cross-slit projection**

**Def:** set of all lines connecting two line segments in general position

![](_page_17_Figure_2.jpeg)

- applications
  - city street
  - museum gallery
  - neolithic or beauty cave
  - underwater shipwreck
  - mile-long coral reef
  - artery or intestine

[Zomet03]

#### **Technical challenges**

- pose estimation
- high dynamic range
- perspective distortion

#### No pose estimation [Zheng03]

![](_page_19_Picture_1.jpeg)

© 2004 Marc Levoy

## **Pose from image matching**

![](_page_20_Figure_1.jpeg)

# **Pose from image matching**

![](_page_21_Figure_1.jpeg)

# **Pose from image matching**

![](_page_22_Figure_1.jpeg)

### **Pose estimation failure**

![](_page_23_Picture_1.jpeg)

#### **Pose from active sensors**

# GPS + IMU + LIDAR + image

## High dynamic range video

![](_page_25_Picture_1.jpeg)

Basler A504kc

![](_page_25_Figure_3.jpeg)

## Low exposure

![](_page_26_Picture_1.jpeg)

### **Medium exposure**

![](_page_27_Picture_1.jpeg)

## High exposure

![](_page_28_Picture_1.jpeg)

### High dynamic range panoramas

![](_page_29_Picture_1.jpeg)

single exposure

![](_page_29_Picture_3.jpeg)

three exposures, combined and tone-mapped

![](_page_29_Picture_5.jpeg)

## **Distortion in pushbroom panoramas**

![](_page_30_Figure_1.jpeg)

#### Interactive design of multi-perspective panoramas [Roman et al., Visualization 2004]

![](_page_31_Figure_1.jpeg)

![](_page_31_Figure_2.jpeg)

© 2004 Marc Levoy

## **Digitizing the United States**

![](_page_32_Figure_1.jpeg)

- 2.6 million miles of paved roads in the U.S.<sup>1</sup>
- 900,000 miles of urban streets
- 180,000 hours at 10 mph (both sides of street)
- 50 vehicles × 6 hours/day × 600 days

<sup>1</sup> <u>http://www.bts.gov/publications/national\_transportation\_statistics/2003/html/table\_01\_05.html</u>

## **Digitizing San Francisco**

![](_page_33_Figure_1.jpeg)

- 950 miles of streets<sup>1</sup>
   (~50% are commercial)
- 190 hours at 10 mph (both sides of street)
- 1 vehicle ×
   6 hours/day ×
   15 days
- 7,200 commercial blocks ×
   2 sides = 14,400 panoramas

#### **The vehicle**

![](_page_34_Picture_1.jpeg)

- Sebastian Thrun's modified Volkswagen Toureg
- GPS + IMU + odometry + LIDAR + high-speed video
- <u>not</u> autonomous in S.F!

### **Storage requirements**

raw video (compressed 20:1)

 San Francisco
 4 terabytes
 U.S.
 1.6 petabytes

panoramas (compressed 5:1)
 – San Francisco 50 gigabytes
 – U.S. 20 terabytes

#### Social issues

- avoid residential streets?
- 1<sup>st</sup> storey of buildings only?
- pixelate people and license plates?

![](_page_36_Picture_4.jpeg)

# **Aesthetic issues: removing foreground objects**

![](_page_37_Picture_1.jpeg)

people

- reshoot to remove the big occluders
- small ones give a sense of place, and they' re hard to remove!

#### • aligning and blending videos

![](_page_38_Picture_2.jpeg)

aligning and blending videossegmenting stores, OCRing addresses

![](_page_39_Picture_2.jpeg)

- aligning and blending videos
- segmenting stores, OCRing addresses
- visualizing cityscapes

![](_page_40_Picture_4.jpeg)

![](_page_40_Figure_5.jpeg)

2004 Mar

- aligning and blending videos
- segmenting stores, OCRing addresses
- visualizing cityscapes
- rural highways (from forward-looking video?)
- linear panoramas of rivers, ski slopes, corals reefs, underwater shipwrecks, etc.

# While we' re out there...

#### • other sensing modalities

- omni-directional video
- sound
- weather, air quality
- signal strength: cell phone / Wi-Fi / GPS / etc.
- easily derived data
  - driving speed  $\rightarrow$  traffic
  - $-3D \mod \rightarrow \text{ lines of sight (need aerial data?)}$
  - count parked cars, garages, people, graffiti
  - changes over time

## Search images by...

- link to specific web site
- street address
- telephone number
- latitude / longitude / time
- category ("pizza"), type ("cheap"), brand ("Pizza Hut"), feature ("red roof")
- search for other images like this one

![](_page_44_Figure_0.jpeg)
